SECTION 4 | NAVIGATING NEXT STEPS

ADVENTURE AWAITS
“Science, beauty, freedom, adventure. What more could you ask of life?”

—CHARLES A. LINDBERGH, AVIATOR
Flight is a practice in dualities: land and sky, fore and aft, climbs and descents. The same can be said of flight training—it is an inspiring process that will encourage you to bring together unexpected aspects of your personality and skill.

As you embark on your flight training journey, you probably have your own perspective on becoming a pilot. Maybe you’ve spent years buffing up on the latest technologies in aviation. Maybe you can’t hear a plane fly by without looking up and wondering what it would be like to take the controls. Maybe you’re curious about the process of earning your pilot certificate (often referred to as your “pilot license”), but you don’t know what it entails.

Regardless of your reasons for exploring the world of general aviation, you’ve found your way here.

Now what?

Now it’s time to start taking action. This book will act as a guide as you take your first steps toward becoming a pilot. It will provide you with a set of tools to help you make the most of your flight training experience—from setting a budget to choosing a flight instructor—and help you turn your dreams into reality.
HEAD. HANDS. HEART.
BEGIN YOUR FLIGHT TRAINING JOURNEY
Flight training will enrich your life in countless ways. You’ll learn to balance technical training with the freedom of flying towards an endless horizon. You’ll adopt new ways of speaking, navigating, and calculating your position. What initially feels like a complex process will slowly become second nature, and you will always have a great story to tell.

Through the course of your training, you will also have the chance to foster a close relationship with your flight instructor, who will act as your personal guide into the world of aviation.

There are many reasons to become a pilot—but each journey is unique. So start thinking about your motivations, inspirations, and aspirations as a pilot. With this knowledge you can approach your training with a clear purpose and open mind.
“When once you have tasted flight, you will forever walk the earth with your eyes turned skyward, for there you have been, and there you will always long to return.”

-LEONARDO DA VINCI, INVENTOR
WORKSHEET

MOTIVATIONS & SKILLS

People choose to fly for many reasons. Use this worksheet to reflect on your motivations for becoming a pilot. As you continue through your flight training program, this sheet will serve as a reminder of why you first decided to pursue your dream, and help you keep sight of your training goals. This is a good resource to share with your instructor so he/she can tailor your training.

WHY FLY?

I WANT TO FLY SO I CAN...

- Experience the world from a new vantage point.
- Fly loops and rolls.
- Conquer my fear of heights.
- Begin a career in aviation.
- Enhance or build my business.
- Fulfill a childhood dream.
- Prove to myself that I can.
- Meet new people, visit new places.
- Serve my community.
- ..............................................................
- ..............................................................

I’M MOST EXCITED ABOUT...

- Every takeoff. Every landing.
- The stories I will tell my family and friends.
- The first flight when the instructor doesn’t touch the controls.
- My first solo flight.
- The day I hold my pilot certificate in my hand.
- ..............................................................
- ..............................................................

WHAT CAN I DO WITH MY PILOT CERTIFICATE?

It’s never too early to start exploring ways you can engage with aviation once you’ve completed your flight certification. Mark the areas below that interest you.

- Plan a weekend getaway with my family—to the beach, the mountains, or a city I’ve been wanting to explore.
- Participate in Fly Out events and meet up with pilots at a neighboring airport.
- Go out for lunch at an airport restaurant a few towns away.
Earn my Instrument Rating so I can fly in low visibility and cloud cover.
Continue my flight training to eventually become a flight instructor or commercial pilot.
Leverage travel freedom to enhance my business

**ADDITIONAL IDEAS**

- ...
- ...
- ...

**SKILLS & KNOW-HOW**

*Here are just a few of the skills you can learn as a part of flight training. Which ones are you excited about?*

- Mathematical reasoning
- Spatial awareness
- Situational awareness
- Communicating with air traffic control
- Expertise in aviation standards and regulations
- Science, physics, and engineering knowledge
- Mechanical proficiency
- Attention to detail
- Troubleshooting
- Critical thinking
- Contingency planning
- Ability to see the big picture
- Understanding of aviation acronyms and alphabet
Learn to Fly
You’ll be taking the controls from Day 1. In fact, it’s not uncommon to take off, fly, and even land the plane during your introductory flight lesson.

Solo Flight
During the first solo flight, students typically perform three takeoffs and landings, while the instructor watches from the ground. This is an exciting accomplishment that showcases all the hard work and training you’ve done up to this point.

Fly to Other Airports (Cross-Country)
Often referred to as a “cross-country” flight, you will learn how to navigate to, communicate with, and land at other airports as a part of your flight training.

Learn, Practice, Study
You will start building your aviation knowledge during the first part of your training experience. As you learn new skills and theories, it’s helpful to review these techniques frequently, and bring them into your flight training practice.

Student Pilot Certificate (Medical Exam)
As a prerequisite for solo flight, students pursuing a private pilot certificate must pass a basic medical exam which also serves as their student pilot certificate. Students pursuing a sport pilot certificate don’t need to pass the medical exam.

See Appendix on page 58 for more information.
Written Exam
Once you’ve completed your ground school training, you will take the “written” test—a computer-based multiple choice exam created by the FAA (Federal Aviation Administration). It will test your knowledge of the theories covered in ground school.

FLIGHTS OF PASSAGE
Your flight training journey, from start to finish

Practice Flying
Maneuvers & Landing
Once you’ve done your solo and cross-country flights, you’ll spend time practicing your maneuvers in preparation for your checkride. During this time, your flights will be a mix of solos, and flight lessons with your instructor.

Checkride
(Practical Test)
The “checkride” is an oral and practical test of your aviation skills—and it brings together elements from every aspect of your training. During your checkride you’ll fly with an FAA Designated Examiner who will measure your skills against Practical Test Standards for pilot certification. In addition to observing your technique as a pilot, the examiner will ask you questions to evaluate your knowledge of aviation theory.

Go Explore; Keep Learning
Pilot certification is just the beginning of your journey as an aviator. Whether you continue your training to earn other ratings and certificates or share your passion for flying with friends and family, there are countless ways to engage with aviation beyond your initial training.

Written Exam
Once you’ve completed your ground school training, you will take the “written” test—a computer-based multiple choice exam created by the FAA (Federal Aviation Administration). It will test your knowledge of the theories covered in ground school.
THE INTRODUCTORY FLIGHT

No matter how far aviation takes you, your introductory flight will remain a treasured memory. The intro flight is a brief but comprehensive introduction to the complete experience of a flight lesson. Your flight instructor will give you an overview of preparatory steps, such as checking the weather and performing a preflight inspection of the aircraft you will fly. Since training aircraft are equipped with dual controls, you will be a participant from start to finish. You’ll get a taste of the fundamentals of flying— not to mention an incomparable view of your local area. And you’ll have an amazing answer to the question, “What did you do today?”
WHO WILL HELP ME?
YOUR FLIGHT TRAINING GUIDES, GROUPS, AND GROUND SUPPORT

FLIGHT SCHOOLS & FLYING CLUBS

Your flight school or flying club is the nerve center of the flight training experience. It’s a place to field questions, give and get feedback, and ask about the long-term experiences and costs of your flight training. It’s also the perfect place to take a curious family member or friend who wants to know more about your flight training.

FLIGHT INSTRUCTORS

Your flight instructor is your go-to person for any questions pertaining to your particular flight training program. A good instructor ensures that you gain hands-on experience in the air, makes you feel safe, and encourages you to be honest about your particular challenges and passions. Using one instructor for your training maintains consistency, but using multiple instructors allows for schedule flexibility and broadened resources.
Other Flight Students

Your fellow flight students can be a valuable resource and support throughout your training. Ask your instructor or flight school to introduce you to some of their other students. Online communities like myft.org can also provide support. Whether you ask for advice from someone further along in training, trade stories or compare logbooks, it’s always inspiring to find a group of pilot friends who also have the aviation bug.

Friends & Family

Your friends and family play an important role in your flight training experience because they act as a natural support system as you challenge yourself in new ways. Even if they don’t understand the technicalities of flight training, include your friends and family in the conversation by sharing photos and experiences. Once you feel comfortable, you can even invite them along for a training flight. Share your passion and progress with your friends and family—in person, online, and any other way you see fit.

Pilots

Connecting with pilots is a great way to engage with the aviation community, get a sense of where you can go with your pilot certificate, and garner wisdom from those who have logged many hours in the air. Don’t hesitate to join a pilot association or approach your fellow pilots at hangar events, airport days or even around the airport.
HOW MUCH WILL FLIGHT TRAINING COST?

Many variables affect the cost of learning to fly, including the frequency of flight lessons, weather conditions, where you fly, your training aircraft, and individual aptitude. The cost of earning your certificate ranges between $5,000 and $15,000, depending on whether you choose to pursue sport, recreational, or private pilot training. (See page 21 for an overview of each of these certifications.)

If you fly more often (multiple times per week, or more), you’ll actually end up spending less money on your flight training. Typically, when you consistently reinforce your training, you don’t have to spend air time re-learning skills or techniques. Instead, you can continue to move forward and make the most of every moment in flight.

CALCULATING HOURS

Total hours in flight refers to the amount of time that you spend in the airplane with the propeller spinning. Remember that you will spend time on the ground during each lesson with your instructor. This time will be spent prepping the plane, covering new flight training theories, and reviewing material.

LOCATION, LOCATION, LOCATION

Instructor and airplane costs vary depending on where you are located. Check with local flight schools to get an estimate of airplane rental and instructor rates, and calculate your budget accordingly.

FOR A LIST OF FLIGHT SCHOOLS AND INSTRUCTORS NEAR YOU, VISIT

letsgoflying.com/school
letsgoflying.com/instructor
MAKE AN ESTIMATE

Use this formula to calculate your flight training cost. Don’t hesitate to ask your flight school or instructor for an estimate.

Remember, often your instructor will cover important skills and techniques on the ground before and after each flight. Most instructors include this time—as well as time in the air—when calculating their billable hours.

\[
\text{TOTAL HOURS IN FLIGHT} \times \text{AIRPLANE RATE} + \text{TOTAL HOURS WITH INSTRUCTOR} \times \text{INSTRUCTOR RATE} = \text{FLIGHT TRAINING COST}
\]

BUILD YOUR BUDGET

Set aside room in your budget for these additional flight training costs.

- Examiner and test fees
- Books and resources
- Aviation headset
- Insurance (if applicable)
- Simulator practice costs
WHAT TYPES OF SCHOOLS CAN I CHOOSE FROM?

As a flight student, you can choose from two types of flight schools:

**PART 141 & PART 61**

These names refer to the parts of the federal aviation regulations (FARs) under which the schools operate.

The most relevant differences between the two are structure and FAA oversight.

**Part 141 flight schools** are periodically audited by the FAA, must have detailed FAA-approved course outlines, and are required to meet student pilot performance rates. Part 141 schools might be better for you if you prefer a more structured environment or want to fly professionally.

**Part 61 flight schools and independent flight instructors** do not have the same paperwork requirements and FAA oversight as Part 141 schools. Learning at a Part 61 school can give students the flexibility to adapt flying lesson content and sequence to meet their needs. For this reason, many part-time students choose to enroll in Part 61 schools.

The most commonly mentioned (but least important) distinction between the two is the minimum flight time required for the private pilot certificate—40 hours under Part 61, and 35 hours under Part 141. However, considering that the national average for earning a private pilot certificate is 60-75 flight hours, this difference isn’t the most important factor for choosing a school.

Your choice of flight school depends on your goals, personal preferences, available time, location, and other factors that fit your specific needs.
WHAT TYPES OF CERTIFICATES CAN I EARN?

PRIVATE

Most flight students in the United States earn a traditional private pilot certificate. This is often referred to as “having your private.” It has the fewest limitations and, with additional training, can be upgraded to include more advanced capabilities such as flying through clouds, flying an airplane with two or more engines, or flying professionally. The minimum flight time requirement to be eligible for a private pilot certificate is 40 flight hours. Most students fly 60-75 hours before testing.

RECREATIONAL

The recreational pilot certificate is a more limited form of the private certificate. It’s a great way to earn your wings if you’ll be flying close to your home airport during the day with no more than one passenger. It requires less time and money to earn than the private. Most people who start down this path eventually go on to earn the private certificate. If you become a recreational pilot, additional training and experience will allow you to easily upgrade to a private pilot certificate. The minimum flight time required to be eligible for a recreational certificate is 30 hours. Like the private certificate, most students budget for more hours of flight training time.

SPORT

The sport pilot certificate is perfect for people who want to get back to—or start with—the basics of flying. Sport pilots can fly a specific limited class of aircraft known as light sport aircraft (LSA). These are smaller, lighter, less complex, one- or two-seat airplanes. Because light sport aircraft recently entered the industry, not every flight school will have them available. Sport pilots are not required to have medical certificates. With additional training and a medical certificate, you can easily upgrade to less restrictive certificates. The minimum flight time required to be eligible for a sport pilot certificate is 20 hours. Most students budget for more hours of flight training time.
"To most people, the sky is the limit. To those who love it, the sky is home."

-Anonymous
people, to most people, the sky is the limit. To those who love aviation, the sky is home.”
CHAIR YOUR TRAJECTORY
SET YOUR PLANS IN MOTION
Now that you have a sense of what the flight training journey entails, it’s time to set your plans in motion. Use the worksheets in this section to get a sense of a training style that works for you, organize your training schedule, and begin to share your flight training experience with friends and family.
IDENTIFYING YOUR LEARNING STYLE

Aviation involves a great deal of skill and technical training. Through the course of your training you’ll develop the confidence, knowledge, and self-discipline required of a successful pilot.

Take a moment to think about your work habits and learning style, so you can tackle your training in a manner that’s most effective for you.

TIPS FOR SUCCESS

Are you better at working in a group or alone? Do you prefer to work at your own pace, or do you like having a set schedule when you learn new information? How do you best receive information?

Think about the last time you learned a new skill—whether it was a computer program for work or the best method for grilling a steak. Write about your learning experience below. Share this sheet with your instructor as a conversation-starter about your preferred learning methods.

THE LAST NEW SKILL I LEARNED WAS .................................................................

How did you learn this skill? ............................................................................................................
....................................................................................................................................................................
....................................................................................................................................................................
....................................................................................................................................................................
....................................................................................................................................................................

Did you enjoy learning in this way? Why? ........................................................................................
....................................................................................................................................................................
....................................................................................................................................................................
....................................................................................................................................................................
....................................................................................................................................................................

What resources do you wish you had access to during this experience? ................................
....................................................................................................................................................................
....................................................................................................................................................................
BE HONEST

Be honest with yourself about your schedule and limitations—and then focus on areas where you can make small changes to fit aviation into your life. Maybe you plan mid-week flight lessons one evening a week. Maybe you devote 30 minutes of your TV time to studying course material instead. Whatever you do, remember that all of these small changes accomplish a much larger dream.

Write down some small ways you can fit aviation into your life.

SHARE THE EXPERIENCE

Tell your friends and family about your flight training goals and experiences. Announcing your milestones to the world will help keep you accountable and motivate you.

Write down the names of people you’d like to share this experience with—or tell your entire social media network.
START IT OFF RIGHT

Take a look at your weekly schedule and find a consistent time that will work for your flight training lessons. (It’s often possible to schedule morning or evening lessons during the week.)

Discuss this plan with your family or significant other. Once you’ve chosen a good time for your training, share your calendar with your flight instructor to ensure that your schedules line up. Keep in mind that the weather will constantly play a factor in your ability to fly. It’s often a good idea to schedule additional flight lessons, knowing that sometimes you’ll be “weathered out” and will have to cancel a flight.

PLAN AHEAD

Be mindful of upcoming events or time commitments that might interfere with your flight training, and think about how you can plan around these commitments.

UPCOMING EVENTS

....................................................................................................................................................................
....................................................................................................................................................................
....................................................................................................................................................................

SAFETY STANDARDS

Compared to automobiles, general aviation—defined as all kinds of flying except for the airlines and military—has about one-tenth as many accidents on a per-vehicle-mile basis, and the accident rate has dropped steadily since 1980. There are several reasons for this stellar safety record. Training for a pilot certificate is much more rigorous than it is for a driver’s license. Mandatory ground and flight training, along with written and practical tests, ensure pilots have achieved a basic level of proficiency. Periodic, recurrent training helps maintain and improve skills so pilots are safe in the air.
MONEY MATTERS

“When I came back to flying after 38 years, I had some money set aside and I had a plan. First the knowledge test. If I wouldn’t study for that this time around, no flying. After I passed the test, I searched diligently for the cheapest plane in my area—a Cessna 152. (Thankfully, the plane is owned by one of the best CFIs in town!) I use flight simulator software between lessons to practice whatever I’m learning.”

—REGINA COKER

“I budget a certain amount monthly. This enables me to complete my private pilot certificate in whatever time it takes, and allows me to continue flying thereafter.”

—BRETT SPRINGALL
You’ll finish your flight training with more than a pilot certificate. You’ll have a greater understanding of yourself and your capabilities. This is because flight training challenges and inspires each student in a different way.

Take a minute to explore the areas in which you’d like to grow through flight training. Which of the challenges below resonate with you? Mark the areas you’d like to focus on, and then share this sheet with your flight instructor or flight school operator.

- I’m concerned about the amount of time flight training takes.
- I’m worried about the cost of flight training.
- Heights make me nervous.
- I think I might make a mistake or get lost when I’m flying.
- I’m nervous about speaking on the radio.
- Math isn’t my strongest suit.
- I’m concerned that I won’t be able to finish training once I start.
- I’m afraid of flying.

For more reading about natural fears related to flight, visit aopa.org/letsgoflying/stories/080829fear.html
“My favorite aviation activity is planning for a cross-country flight. It covers all aspects of flight, from the romantic daydreaming of where you want to fly, to the practical calculations of fuel, distance, and aircraft performance. It takes you out of your comfort zone; it forces you to plan ahead, work with other pilots in unfamiliar airspace, and each flight is truly an adventure.”

–AMELIA ROSE EARHART
MEET YOUR MATCH

CHOOSING A FLIGHT SCHOOL AND INSTRUCTOR THAT WORK FOR YOU
As a student, you have control over two of the most important factors in your flight training experience: you get to choose your flight school and flight instructor.

Where you learn plays an important role in your overall training experience, satisfaction, and success as a pilot. Like any major investment, the best way to make an informed decision is by doing some comparison shopping.

Whether you choose to learn from an independent flight instructor at your local airport or instructor at a flight school, your search should involve the same array of questions. The worksheets in this section are designed to help you choose a school and an instructor that are right for you.
“A mile of road will take you a mile, but a mile of runway can take you anywhere.”

–ANONYMOUS
HOW TO USE THESE WORKSHEETS

**ENGAGE, YOUR WAY**

Depending on where you live, you might have many options for flight training—or just a few. No matter what your situation is, make sure you investigate your options.

**COMPARE & CONTRAST**

It’s okay if a school or instructor doesn’t fulfill every single requirement or checkbox. By using these worksheets you’ll know what to ask, understand how to compare your options, and learn what matters most to you.

**CHOOSE WISELY**

In addition to assessing your instructor’s experience, it’s important to get a sense of his or her passions, technique, and instructor philosophy. Through this process of careful comparison, you can select someone who matches your personality, as well as your needs.

**KEEP IT OPEN**

As you continue through your training, you can change instructors, and even schools, if you feel that you’re not getting what you need from your training.

**FOR A LIST OF FLIGHT SCHOOLS NEAR YOU, VISIT**

**WHEN YOU VISIT**

-Talk to other students at the airport who are in the midst of their flight training. Ask them about what they like or find valuable at that particular school, and have them explain how the flight school helped them deal with problems or challenges in their training.

-Chat with people around the airport and get a sense of the school’s atmosphere and philosophy. Like people, flight schools have personalities, and it’s important that you choose one that works with your own.

Do you follow a syllabus?

How will I know what comes next in my flight training?

How will my time in the air be spent?

Do you offer ground instruction for skills that I can learn when I’m not in flight?

In what areas will we be flying on my training flights?

Is it possible to fly different routes throughout the course of my training?

Can you suggest any flight planners or websites that might be useful to me throughout my flight training?

PREPARE FOR TAKEOFF
NAVIGATING YOUR NEXT STEPS
Your school and instructor will do their best to support you throughout your training, but you can also make sure your flight training experience is what it should be.

This means following up with instructors about lesson plans, spending time between lessons studying the next skills you’ll be mastering, allowing time to prepare for your flights, and giving your flight school helpful feedback. Beyond this, your local aviation community will provide excellent avenues for involvement—and opportunities to connect with others who share your passion for flight.
“I grew up interested in aviation and space. I always wanted to learn to fly, but I did not even try to earn a pilot certificate because of the high cost of the lessons. I began flight training after realizing that flying, especially sport aviation and light sport aircraft, was not as expensive as I originally thought. I am a middle school history teacher and education is one of my primary interests. Teaching kids is my passion, and I hope to inspire students to become pilots, aircraft mechanics, or simply work in the aviation fields. My goal is to become a Sport Pilot so that students can call me the flying teacher. Perhaps it will inspire my students to learn to fly if they realize that anyone, including teachers, can be pilots.”

–JEFF STEPHENSON
HOW CAN I REMAIN ENGAGED?

BUILD YOUR COMMUNITY

There are many ways to connect with fellow pilots and members of the aviation community. Explore the list of activities and events below, and stay on the lookout for additional ways to get involved.

- Attend a local airshow.
- Join a pilot interest group, such as your local airport support group.
- Join or start a new pilot group.
- Invite friends or family to join you on your next training flight.
- Ask your schools about ways you can get involved.
- Watch movies about flying

PRACTICE MAKES PERFECT

Thanks to aviation websites, online videos, and advancements in simulator quality, there are many resources and tools that you can use to reinforce your training and keep your momentum going as you learn new skills and techniques. For a list of useful online tools, visit: ft.aopa.org/students
For many people, dreams are left on the back burner for far too long. By exploring your interest in flight training and setting plans in motion, you’re already on the path to one of the most enriching adventures of your life.

As you celebrate the freedom and challenge of becoming a pilot, remember how you got here. Remember your dreams of seeing the world from a different perspective, of playing in three dimensions, and of pushing yourself to adopt new skills and conquer new challenges.

Now that you’ve planned your journey, selected your school, spoken with instructors, shared your decision with friends and family, and planned your flight training approach, there’s only one thing left to do. Go fly.
APPENDIX

The FAA issues three classes of medical certificates: First Class, Second Class, and Third Class.

The First Class medical certificate is a requirement for many professional pilot jobs, including all airline captains. There are some pilot jobs which require a Second Class medical certificate, which has less stringent requirements than the First Class medical certificate. A Third Class medical certificate is required when not flying for hire. No medical certificate is required when flying gliders, balloons, or light-sport airplanes. If you plan to attend a university that offers a four year degree with pilot certificates included, the university may require a First or Second Class medical certificate.

You will schedule a physical examination with a designated Aviation Medical Examiner (referred to as an AME). Before your appointment, you will complete an online application at https://medxpress.faa.gov/. The application asks you questions about your medical history, doctor visits, and medication usage. The physical examination by the AME will be similar to a general physical exam that you would normally have with your family doctor. The AME will check your visual acuity and color vision, hearing, and blood pressure. There will also be a urine test to check for blood, sugar, or protein in the urine.

If you meet the minimum medical certification standards, the medical examiner will issue you a combination student pilot certificate and medical certificate. When you pass the Private Pilot practical test, you will be issued a temporary pilot certificate, but the combination student pilot/medical will remain valid as your medical certificate until it expires.
